

Dear Hiring Team,

I'm excited to apply for the SDET role at Dotmatics. The opportunity to contribute to a platform that directly supports scientific discovery is particularly compelling, and I'm keen to bring my experience in test automation and collaborative quality engineering to your LUMA team.

I'm a hands-on QA Automation Engineer with strong experience building and maintaining automated test suites using Cypress/Playwright and JavaScript/TypeScript. In my role at Abcam, I've worked within existing frameworks to expand UI and API test coverage, improve regression reliability, and integrate automated tests into CI/CD pipelines to provide fast, consistent feedback on releases.

I enjoy working in a code-first testing environment—writing maintainable test code using asynchronous patterns, debugging failures, and ensuring tests remain stable and trustworthy. Alongside automation, I regularly perform exploratory testing to better understand how features behave in real-world scenarios and to identify risks beyond defined acceptance criteria.

A key part of my role has been taking ownership of quality for specific areas of the product. This includes contributing test scenarios during planning, designing clear and repeatable test cases, and working closely with developers to investigate defects and verify fixes. I value clear communication and collaboration, and I'm comfortable working with cross-functional teams to ensure features are both testable and reliable.

I'm particularly interested in continuing to grow as an SDET. I'm currently developing my Playwright and TypeScript skills further and actively adopting BDD-style approaches to test design. The opportunity to learn from experienced SDETs at Dotmatics while contributing to an established automation framework is exactly the kind of environment I'm looking for.

Dotmatics' focus on combining science, data, and software to accelerate innovation strongly resonates with me. I'm motivated by working on meaningful products, and I'm keen to contribute to a team that is building tools used by scientists around the world.

Thank you for your consideration. I would welcome the opportunity to discuss how I can contribute to your team.

Kind regards,

Kevin Dang
